

Creating Next Generation Data Centers One Server at a Time.

High-performing. Eco-friendly. Energy-sensitive. Cost-effective.

Next generation data centers are more than the reliable, flexible and scalable mission critical facilities of the past. Smart companies like yours are demanding more from their data centers, and together N'compass and Sun Microsystems deliver successful strategic data center solutions.

- **Application Architecture**
- **Green Data Center Health Checkup**
- **Server Consolidation and Standardization**
- **Data Center Capacity Planning**
- **Virtualization Planning and ROI Modeling**
- **Data Center Management Tools**

Strategically planned and optimally designed data centers can deliver ROI and help drive the bottom line.

Healthy Return on Investment

We're helping our clients spend their money wisely so they get a healthy return on their investment. We understand the big picture—from business drivers to technical requirements to physical space layout. Knowing where to invest your money and where to save it is key to experiencing ROI and we have the experience to help you make the right decisions.

Change is Imminent

When you're ready to transition to a blade environment, ready to implement virtualization, or just ready to upgrade a section of your data center to high-performing, eco-friendly, energy efficient servers, rely on N'compass for unmatched professional technology consulting services combined with Sun's superior server technology.

Why N'compass? A Partner for the Long Haul.

- We address your business as a whole; we don't just push server boxes—we strategize and recommend the best solution for your company
- Speed to market: you get more data capacity with fewer servers delivered to you faster, and we handle the installation so your staff can focus on running your business
- You get the professional guidance of data center experts who understand space, power, and cooling capacities of the data center and the impact of blade servers

Why Sun? A High-performing Partner.

- Sun's high-performance, eco-friendly servers are more efficient and energy sensitive than other servers
- Sun servers reduce processing time, streamline the backup process and improve performance
- Sun servers improve database application performance and keep business applications running smoothly so your workforce becomes more productive

Reliable Delivery

At N'compass, our technology consultants are in the background of every Sun Microsystems transaction. We understand the importance of each and every server in your data center so we make sure you get your equipment at the best price, and we guarantee that you get it on time.

N'compass and Sun working together to facilitate next generation data center capabilities like virtualization and blade server environments.
